Dear Jim,

Chuck and I looked over the update. In a nutshell, GP's numbers are in the ballpark of MDEQ's. Although almost always lower than MDEQ's numbers when only unbiased samples from 1993-2007 are used, they don't differ appreciably. Most likely the differences are from using smoothing, i.e., GP's stream tube methodology which has a tendency to depress the concentration values.

Let us know if you have any questions.

John

John and Chuck,

I need you both to take a look at this in the next week and let me know your thoughts. I am sure John Kern may want to speak to you about it, which is no problem. Garry Griffith wants to have a meeting in MI on either 4/3 or 4/4 and this may be one of the topics covered, so I would like to get your feedback. It looks to me like the recalculation based upon the stream tube method is similar to the others Kern produced, but I did not look at the spread sheet.

Anyhow, when you get a chance to look at it lets set up a quick internal meeting. Also, let me know your availability, even if via phone on either 4/3 or 4/4.

Thanks

Jim

Dear Gentlemen,

On behalf of Mr. Garry Griffith and Georgia-Pacific, please find attached two documents regarding Area 1 SWAC calculations. Should you have any questions please contact Garry at your convenience.

Respectfully,
Barb Shreve on behalf of Garry Griffith
